FL FINISHING LINE

After the charging department, the batteries must be finished and checked before to be placed onto the market. Complete finishing lines can be produced following the plant' requests, or only singles machines to be placed on existing lines.

All these machines are adapted to the specific requirements to be able to give the best result in productivity, performances, fastness and simplicity on the size change tuning. It is possible to process both automotive and truck.

The finishing line would be sized complete or it is possible to forecast the inserting of some units on the future with the only forethought to leave some space free. If required after the Final Quality Control a paletizator will be installed.

Finishing line, is now also available on the new size and model with the junction of some machines on the same frame.

Generally finishing line can be considered composed by the following equipment:
(Indexing units are installed in each station)

Every machine is managed by a PLC; in any case it' possible to predispose a general electrical board where the PLC of all machines are connected, so the operator has a general view of finishing plant, by the software.

The Finishing line is now also available with a new size and model with the junction of some machines on the same frame.
